

4<sup>th</sup> GOSPEL Workshop on:

## Gas sensors based on semiconducting metal oxides: basic understanding & applications

**Tübingen (Germany), 7<sup>th</sup> to 9<sup>th</sup> of June, 2015**

### Workshop organizers:

Nicolae Barsan<sup>1</sup>, Kengo Shimano<sup>2</sup> and Udo Weimar<sup>1</sup>

1. - University of Tübingen, Germany

2. - Kyushu University, Japan

The workshop is the fourth in a series of Gospel workshops (<http://www.gospel-network.org>) dedicated to the R&D activities in the field of semiconducting metal oxide based gas sensors. It will be organized by the Universities of Kyushu and Tübingen, over two full days – 8<sup>th</sup> and 9<sup>th</sup> of June – and will be preceded by a social, come-together event on the 7<sup>th</sup> of June.

The previous three workshops demonstrated that the idea to bring together experts from both academia and industry and provide plenty of time for discussions was very fruitful. Therefore, also this edition will keep the very successful format of combining 2 key notes (each 40 min + 20 min discussion) and 4 invited talks (each 25 min and 10 min discussion) with regular oral contributions (each 15 min and 5 min discussion) and poster presentations. As usual, we are ready to host an exhibition for companies active in the field.

At the workshop we will also discuss the opportunity of transforming it in a biennial conference run by a Steering Committee that will take place alternately in Asia and Europe.

### Location

The workshop will take place in Tübingen, Germany in the “Hotel Stadt Tübingen”. For details about the hotel, please have a look at: <http://www.hotel-stadt-tuebingen.de/>. The hotel offers excellent conference facilities.

Tübingen is extremely easy to reach from the Stuttgart Airport (25 minutes drive), which is connected with all major European airports.

### Participation

The attendance is limited to a maximum of 75 participants. In the case in which the demand will be higher, the selection – for non-authors – will be made on a first come, first served basis.

The conference fee is expected to be around 400€ and besides the attendance of the scientific sessions will also cover participation to the social events, coffee breaks and lunch during the workshop.
